Why is it Needed?

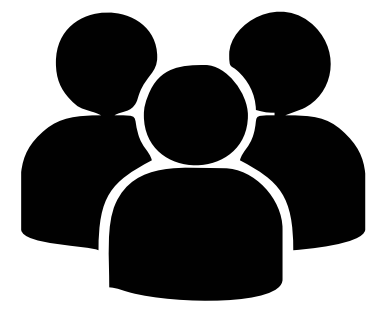

Monitoring

Monitoring at all levels and usage of the systems and reports is vital as it is key to optimal resource planning in terms of inventory maintenance of drugs and infrastructure facilities.

Report generation

Schedules and automatic report generation results in considerable timesaving for the Auxiliary Nurse Midwife (ANMs), which could be utilized for providing better service.

Database

Use of common citizen database can facilitate other Government Departments as well.

GAPS

Transcription error in data conversion from manual to electronic.

No Mechanism for real time geographical **area identification** of the beneficiary

Obsolete data due to irregular data updation

Real time geographical area identification

How does it Work ?

1. Identification

The eligible couples, pregnant ladies and new born children in the age group of 0-6 years are identified.

2. Registering

The details of the health status and other relevant details of the couples, ladies and children along with their geographical areas are registered in the detailed designed format for each.

3. Tracking

Diagnostic information for mother and child and its comparisons at various stages (medicines, checkups, healthcare given etc) by health practitioners and maintained by the electronic medical records.

4. Amber Alert

Special and emergency amber alerts and actions to be taken by the closest medical team and contacts are shared with the concerned individuals. The amber alerts would be abortions, deaths, and any other medical emergency situation for any of the beneficiaries.

5. Plan Sharing

Work plan is created and shared with the ANMs on a daily and weekly basis

5 Features

You need to know

1 **Amber Alert**
